

HEMANT BHADKE

AWS DevOps Engineer | CI/CD | Kubernetes (EKS) | Terraform | Docker | 4+ Years

Nagpur, India | +91-9766670282 | hemantrbhadke@gmail.com | linkedin.com/in/hemantrbhadke | hemantrbhadke.github.io

PROFESSIONAL SUMMARY

AWS DevOps Engineer with 4+ years building CI/CD pipelines (Jenkins, GitHub Actions, ArgoCD) and running Kubernetes (EKS) workloads for enterprise clients including Ricoh and Siemens Energy. Cut pipeline failures 40% and MTTR 60% by rebuilding release automation with Terraform, Ansible, and GitOps. Comfortable owning a deployment end-to-end: infrastructure provisioning, container orchestration, monitoring (Prometheus, Grafana, Datadog), and on-call incident response. Oracle Cloud Infrastructure DevOps Professional certified.

CORE DEVOPS SKILLS

CI/CD & GitOps: Jenkins, GitLab CI, GitHub Actions, ArgoCD, Azure DevOps, GitFlow, Trunk-Based Development

Containers & Orchestration: Docker, Kubernetes (EKS, AKS, GKE), Helm, Istio Service Mesh, ECR, ACR

Infrastructure as Code: Terraform, Ansible, AWS CloudFormation (JSON/YAML), Pulumi (basic)

AWS Services: EC2, VPC, S3, RDS, Route 53, EKS, ECS, IAM, CloudWatch, Lambda

Azure & GCP: Azure Compute, VNet, NSG/ASG, RBAC, Storage, Key Vault, Traffic Manager | GCP Compute Engine, Cloud SQL, GCP IAM

Monitoring & Observability: Prometheus, Grafana, Datadog, Splunk, ELK Stack, Nagios, AWS CloudWatch

Security & Compliance: IAM Policies & Roles, KMS, SSL/TLS, Azure RBAC, HashiCorp Vault, DevSecOps

Scripting & Automation: Python, Bash, Go (basic), REST API, CLI Tooling

ITSM & Process: ITIL Incident/Change Management, RCA, ServiceNow

OS & Web Servers: Linux (Ubuntu, CentOS), Windows, NGINX, Apache Tomcat

Version Control: Git, GitHub, GitLab

PROFESSIONAL EXPERIENCE

Cloud / DevOps Engineer — Infosys (Client: Ricoh)

Jul 2023 – Present

- Rebuilt release pipelines around Jenkins, GitHub Actions, and ArgoCD (GitOps), taking deployments on EKS/AKS to zero downtime.
- Replaced manual provisioning with Terraform and Ansible across AWS/Azure, cutting pipeline failures 40% in Dev/Stage/Prod.
- Translated application requirements into production infrastructure on AWS (EC2, VPC, S3, RDS, Route 53, EKS, ECS, IAM, CloudWatch) and Azure (VNet, NSG/ASG, RBAC, Load Balancers).
- Closed monitoring gaps with Prometheus, Grafana, and Datadog — observability coverage up 35%, catching issues before they hit users.
- Locked down environments with least-privilege IAM, KMS encryption, and Azure RBAC, folded directly into the CI/CD pipeline rather than bolted on after.
- On-call for P1/P2 incidents; ran RCA and change management under ITIL to bring recurring issues down, not just resolve them once.
- Mentored junior engineers on IaC and Python/Bash scripting, raising team delivery output 25%.

Cloud / DevOps Engineer — Infosys (Client: Siemens Energy)

Jun 2022 – Jun 2023

- Cut MTTR 60% by standing up end-to-end Nagios monitoring and scripting alert automation in Python and Bash.
- Pushed SLA adherence and uptime up 30% by tuning alert thresholds and building Grafana/Splunk dashboards for audit readiness.
- Set up production networking across AWS/Azure — VPC, load balancers, DNS, subnetting, firewall rules — from the ground up.
- Rolled out Istio service mesh on EKS/AKS for traffic routing, mTLS, and policy-based access control between services.
- Built IAM, RBAC, and KMS checks into the CI/CD pipeline itself, so security issues surfaced before deployment, not after.
- Debugged distributed systems across Linux, Windows, and cloud infra; drove RCA and change management under ITIL.

KEY PROJECTS

Azure Landing Zone — Multi-Cloud IaC Design

- Built a Terraform-based Azure Landing Zone with management groups, RBAC, NSG/ASG rules, and IAM policy assignments for enterprise governance.
- Set up VNet peering, Traffic Manager, and Azure DNS for a secure hub-spoke topology across Dev/Stage/Prod.
- Centralized secrets in Azure Key Vault with encryption at rest and Managed Identity access.

Multi-Account AWS Architecture (Self-Initiated) — code on GitHub

- Designing a secure multi-account AWS setup (EC2, VPC, S3, RDS, Route 53, EKS, ECS, IAM, CloudWatch) with least-privilege IAM role separation.
- Writing modular Terraform/CloudFormation for EKS node groups, VPC networking, and FinOps cost-tagging.

Disaster Recovery & Backup Automation

- Cut RTO 50% by automating AMI snapshots and S3/Azure Backup archival with AWS Lambda and CloudWatch Events.

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified DevOps Professional
- Infosys Certified Kubernetes Administrator – Associate
- Infosys Certified Associate in Ansible Automation
- Red Hat Linux Fundamentals (RH104) – Ver. 9.1

EDUCATION

Master of Technology (M.Tech) — Environmental Engineering

Bachelor of Engineering (B.E.) — Civil Engineering
